It also contains additional objects for managing building plans, sketching, and managing drawings. Architectural objects are built using objects from several object classes, including Drawing, Column, Graphic, Dimension, and Element. The Architectural objects in AutoCAD Architecture are used to create or edit architectural and engineering drawings. The objects can be used for the construction of buildings and other structures and spaces. They are capable of calculating, displaying, editing, and importing and exporting information about the construction of walls, columns, beams, and other structural elements and to analyze building information. They can also edit, import, and export architectural and engineering drawings. AutoCAD Architecture is the fastest growing AutoCAD area with more than 250,000 AutoCAD Architecture users in June 2015. AutoCAD Architecture had more than 2.9 million registered users in November 2012 and 4.1 million registered users in June 2015. AutoCAD Architecture had 40,000 - 50,000 registered users in June 2012.
