AutoCAD's programming interface is exposed to C++ and other programming languages. It allows developers to use the application programmatically, to customize AutoCAD without writing code, or to provide custom applications that can interact with AutoCAD through the API. AutoCAD also has a component exchange format, RESS for Response Stored Expressions, allowing developers to make custom applications which are stored as AutoCAD files. AutoCAD's extended or AutoLISP language is a proprietary programming language for building AutoCAD extensions. AutoLISP allows extensions to be written in a high-level, object-oriented programming language, and in a modular, function-oriented programming language, to speed up and simplify extension development. AutoCAD extensions can be created in any programming language. These extensions are written in AutoLISP, which is compiled into a shared library. Visual LISP is a proprietary programming language for building AutoCAD extensions. Visual LISP allows extensions to be written in a high-level, object-oriented programming language, and in a modular, function-oriented programming language, to speed up and simplify extension development. Visual LISP extensions can be created in any programming language. These extensions are compiled into a Visual LISP application for use by AutoCAD users. Visual Basic for Applications (VBA) is a proprietary programming language for building AutoCAD extensions. VBA enables users to create custom macros to be applied to drawing files in AutoCAD, rather than having to perform functions in the drawing. These macros can be created in any programming language. These macros can be created from scratch by the user, or from the AutoCAD API. VBA is compiled into a Windows DLL. VBA can be stored in the AutoCAD system registry. This allows users to create their own macro libraries and save them in their personal settings. .NET is a proprietary programming language for building AutoCAD extensions..NET extensions can be created in any programming language..NET extensions can be saved in the AutoCAD system registry..NET extensions are stored as native.NET assemblies. These assemblies are stored in a single DLL file and can be added to the registry by the user. ObjectARX is a proprietary programming language for building AutoCAD extensions.
