Screen Design Unlike artists who are usually faced with only a small percentage of their canvases, graphic designers typically have many different types of media with which to work. Today, there are many, many types of screens; they range from giant plasma TVs to tiny smartphones and tablets. People enjoy being able to look at images and be able to download the images from the Internet. Traditional printers and scanners, however, can be limited in the image quality that can be achieved. Many current smartphones and tablets have higher-quality displays than inkjet printers or scanners; in other words, you can get a better quality image from a mobile device than from a home printer or scanner. After a bit of experience and practice, you will learn how to take the skill of creating attractive images and _scale it up_ to mobile device screens. Here are some of the things that you need to keep in mind when creating mobile images for screens: * **Images must be compressed properly:** The memory and computer speed of mobile devices is much less than that of desktop computers. Today, most smartphone and tablet images, whether they are for e-commerce or social media, should be as small as possible. The key here is to use a lossy
